

A scatter plot showing the relationship between Degree (x-axis) and an unlabeled y-axis. The x-axis is logarithmic, ranging from 10^0 to 10^6 . The y-axis is also logarithmic, with major ticks at 10^0 , 10^1 , 10^2 , and 10^3 . The data points are blue dots. The plot shows a power-law distribution for low degrees, a sharp drop-off around degree 100, and a long tail of points at higher degrees, including a few outliers at very high degrees (up to 10^6).
